Why can’t I find a specific vendor or product?

Last Modified on 18/09/2025 3:04 pm EDT

We maintain a very large database, and we're still expanding!

There are a few reasons we might be missing a product you're looking for

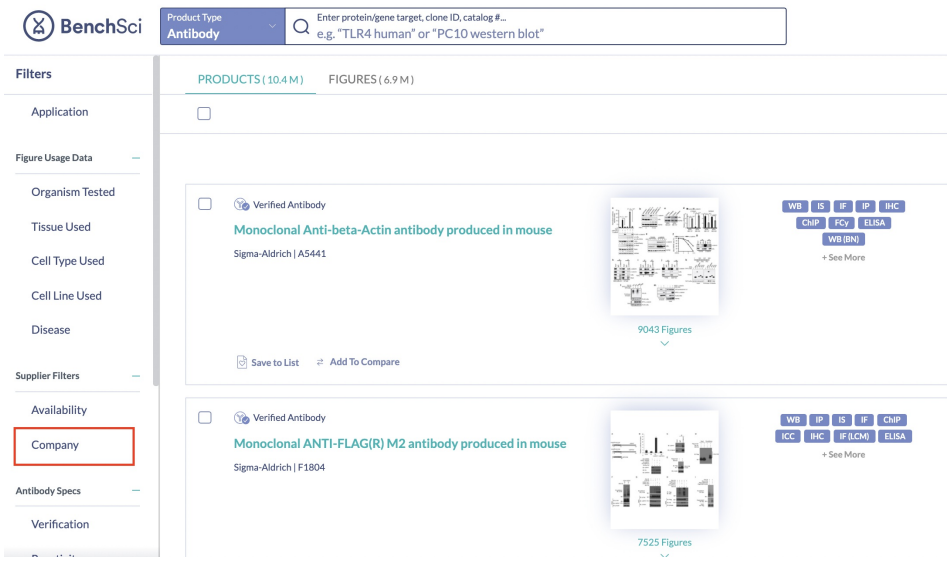
- We don't yet have that vendor's catalog in our database
- It's a new product from a vendor we already have a relationship with

In either case, let us know and we'll reach out to them for their latest catalogs so we can update our database.

Checking if we have a specific vendor

1. Navigate to the products results tab
2. Open the **Company** filter under *Supplier filters*
3. Search the list for your vendor of choice

When you select the vendor, we'll show you all of their products on the platform.



Searching for a specific product

If you are searching for a specific product, simply type the catalog number of the product into the search bar. Clicking the search suggestion will navigate you directly to the product page.
